Flattening conveyor prepares bags for stacking

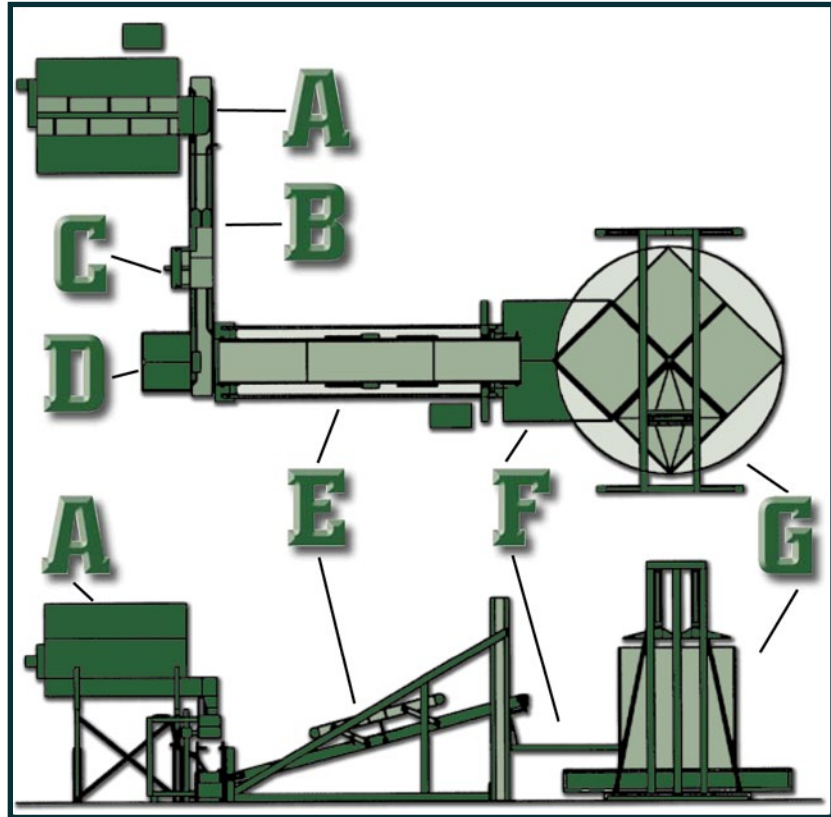

Non-stop operation with revolving palletizing carousel

A proud member of the BouldinCorp™ Family

Optional Bagging Equipment

Optional pieces of equipment to enhance your bagging operation.

Bags travel down the bag carrying conveyor(B) after having been filled by a soil bagger(A) and sealed with a hot air sealer(C).

The bags then travel to the bag kicker(D) and are diverted onto a bag flattening conveyor(E), where they are compressed and flattened while moving up the elevating platform(F). Bags are then stacked on the palletizing carousel(G).

The elevating platform is raised as the stack on the carousel becomes higher. When the pallet is filled, the platform can be lowered and the carousel then rotated 90° to provide personnel with a new pallet. The filled pallet is then taken away by a forklift and is ready to be stretch-wrapped for shipment.

Diagram Key:

A	Soil bagger
B	Bag carrying conveyor
C	Hot air sealer
D	Bag kicker
E	Bag flattening conveyor
F	Elevating platform
G	Palletizing carousel
